

Pewag Stainless Steel Pump Chain

Pewag Stainless Steel Pump Chain is a high-grade pump chain that has a load capacity that ranges from 320 to 12,000 kg. Their welded design, solid construction and range of components make it suitable for submersible pumps and breathers in water and wastewater applications.

Systematic expediency

Pump chains can be tested by Nobles for perfection and serialised with a dedicated identification tag and test certificate and they can be issued individually for each chain. Enlarged master links at the beginning, at segmented intervals and the end of the chain make them ideally suited for step-by-step lowering, lifting or locking.

Upon request, we also offer customised variations:

A two-legged system with "Y" for pumps equipped with 2 eye screws

Alternative end fittings, such as eye hooks, BWI links or shackles

Additional stabilisation chain

Variation of standard segment length

Customised models available

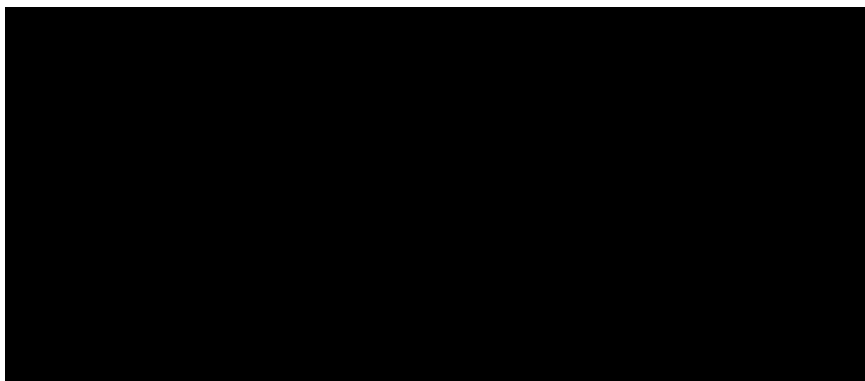

Stainless steel hoist chains for pump stations are available upon request

We recommend safety shackles type SSWI for joining the pump to the chain. When placing an order, please indicate the desired total length of the chain or the number of segments as well as the end fitting.

Note: The actual length is a multiple of the segment length, plus the length of the end fitting.
